"Learning without thought is labor lost;
thought without learning is perilous."

Summary

I am an AI Engineer with hands-on experience in applied Data Science in banking and a strong interest in Computer Vision. Working with large-scale banking data has taught me to look beyond model performance and consider how a solution supports business decisions, profitability, and other business goals. I enjoy applied research: understanding ideas deeply, testing them, and turning them into practical systems. I am looking for a Computer Vision Engineer or Data Scientist role where I can combine this research mindset with my engineering background and business understanding.

Education

Posts and Telecommunications Institute of Technology (PTIT) Ho Chi Minh City, Vietnam
Bachelor of Engineering in Artificial Intelligence *Aug 2021 – July 2026*

- Cumulative GPA: 3.4/4.0.
- Graduation thesis: 9.7/10 (A+), highest-graded thesis in the Artificial Intelligence program.
- Relevant coursework: Machine Learning, Deep Learning, Data Mining, Data Analytics, Computer Vision, Linear Algebra, Probability and Statistics, Optimization.
- IELTS 7.5 (Overall).

Experience

Data Scientist – Full-time June 2026 – Oct 2026
Orient Commercial Joint Stock Bank (OCB) *Ho Chi Minh City, Vietnam*

- Gained practical understanding of the banking credit-model lifecycle, from business requirements and large-scale data sourcing to EDA, feature engineering, modeling, and validation, with an emphasis on risk management throughout the process.
- Supported online and offline feature stores development on Databricks based on defined feature specifications and transformation logic, providing consistent feature inputs for ML model training and inference.
- Deployed three ML models to production using Databricks Model Serving, defined API response contracts, and collaborated with data governance and IT teams on deployment requirements; explored MLflow and MLOps workflows to support model lifecycle management.
- Proposed AI product ideas for the Data Science/AI team, including cross-sell modeling, recommendation systems, and Smart Paste to improve customer experience and support revenue growth.
- Explored operations research methods, including linear programming, to formulate profit-maximization problems under business constraints and investigate potential banking applications

AI Tutor – Part-time Jan 2026 – June 2026
Quanskill (Online Training Platform) *Ho Chi Minh City, Vietnam*

- Explained programming, mathematics, and AI concepts through live sessions, guiding learners from basic foundations to advanced topics such as computer vision and natural language processing.
- Created recorded educational videos and supporting materials, including slides, documents, and exercises, to help learners review concepts and continue self-study after live classes.
- Participated in developing AI workshops that introduced the importance and practical applications of AI in daily life and career development for diverse audiences.
- Contributed as an AI Builder to DataVision, a multi-domain AI data intelligence platform that connects data ingestion, dashboard analytics, prediction, RAG chatbot, AI suggestions, and report-generation workflows.

AI Engineer Intern Jun 2025 – Aug 2025
FPT Information System (FPT IS) *Ho Chi Minh City, Vietnam*

- Participated in designing a RAG architecture for Vietnamese legal question answering, including document preprocessing, retrieval flow, and LLM integration.

- Built a preprocessing pipeline for Vietnamese legal text files to improve retrieval quality and downstream answer relevance.
- Developed a FastAPI service exposing the RAG pipeline through REST APIs for application integration and internal demos.

Projects

AI-Based Mobile App for Durian Leaf Disease Classification Sep 2025 – Dec 2025
Individual Graduation Thesis Project *PTIT, Ho Chi Minh City, Vietnam*

- Proposed and trained a lightweight CNN model combined with particle swarm optimization to improve disease-recognition performance on 2,595 real durian leaf images, across six classes with the technique and results published in *Applied Fruit Science*.
- Evaluated developed models on 98 images independently collected, expert-reviewed field images from Lam Dong, identifying a domain-shift gap: acc dropped from 90–92% to 43–61% under field conditions, MobileNetV3-Large generalizing best.
- Developed an Android application for farmers with optimized AI Vision model and GenAI-assisted treatment recommendations tailored to the predicted disease condition on Vietnam durian fruit.
- **Code:** github.com/ronalhung03/Durian

AI-Based Mobile System for Tomato Disease Detection and Monitoring Jun 2025 – Aug 2025
Project Lead (2 members, Score: 9.8/10, A+) *Internship Project*

- Collected and curated image data for 12k images across 5 classes and built a preprocessing pipeline for model training.
- Proposed a MobileNet-based architecture that outperformed a standard baseline model on classification, improving mean test accuracy from 98.4% to 98.9%.
- Converted the proposed model to TensorFlow Lite, reducing model size by 84.7% from 18.08 MB to 2.76 MB for mobile deployment.
- Published the methodology and experimental results as a full paper at the International Conference on Real-time Intelligent Systems (RTIS 2025).
- **Notebook:** kaggle.com/code/phihngtrnnguyn/tomato-leaf-classification-mobilenet

Tran Nguyen Phi Hung, et al. "AI-Based Mobile System for Tomato Disease Detection and Monitoring." *International Conference on Real-time Intelligent Systems*, (RTIS 2025). DOI: 10.1007/978-3-032-23396-7_7.

Certifications

Building AI Agents and Agentic Workflows – IBM / Coursera	Feb 2026
Build, Train and Deploy ML Models with Keras on Google Cloud – Google Cloud / Coursera	Jan 2026
Machine Learning in Production – DeepLearning.AI / Coursera	Jun 2025
Deep Learning Specialization – DeepLearning.AI / Coursera	Apr 2025
Google Advanced Data Analytics Professional Certificate – Google / Coursera	Mar 2025

Technical Skills

Programming: Python, SQL, Java, C/C++.
Machine Learning: PyTorch, TensorFlow/Keras, Scikit-learn, OpenCV, CNNs, transfer learning, TensorFlow Lite.
Generative AI: LangGraph, RAG pipelines, LLM integration.
Data & ML Platforms: Databricks, Apache Spark, Model Serving, MLflow.
Software Engineering: FastAPI, REST APIs, Docker, Git/GitHub/Gitlab
